DETAILED ACTION

Claims 1-20 are present for examination.

Priority

Acknowledgement is made that no priority either foreign or domestic is claimed for this application and as such the filing date (9/30/2003) is being used for this examination.

Drawings

The drawings are accepted.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Eustace P. Isidore on 3/1/2007.

The application has been amended as follows:

Within claims 3, 15, and 18 the wording "a scan chain input and a shift chain input" present within the first limitation of each claim following the preamble is replaced within "a scan chain input or a shift chain input."

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

The present invention pertains to an input circuit for filtering/blocking either a shift input or a scan input into scan only single input latches by way of first and second clocks.

Claims 1-20 are allowable over the prior art because the subject matter within the claims recites features such as: a two-tiered NAND gate configuration providing a resulting output to a scan-only single input latch, wherein a first two-input NAND gate of the two-tiered NAND gate configuration receives as inputs a first clock signal along with a scan-chain/scanin input which yields a scan chain NAND output, wherein a second two-input NAND gate of the two-tiered NAND gate configuration receives as inputs a second clock signal along with a shift-chain/shiftin input which yields a shift chain NAND output, wherein both the first and second two-input NAND gates process their respective inputs during an input operation, and wherein a third two-input NAND gate of the two-tiered NAND gate configuration receives as inputs the scan chain NAND output and the shift chain NAND output which concludes the two-tiered NAND gate configuration with the third two-tiered NAND gate output being one of the scan-chain/scanin input or a shift-chain/shiftin input to the scan-only single input latch; which is not found, taught, or suggested within the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
